

AI Engineering Assignment

Build a DRHP Drafting Agent (Working Output Required)

This is not a design or research exercise.

This is an execution test.

If you are selected, you will work on automating real capital-markets workflows used by bankers and compliance teams. This assignment mirrors that work.

Non-Negotiable Requirement

Your submission **must run end-to-end**.

We should be able to:

1. Provide your system a real DRHP (or DRHP-like inputs)
2. Add supporting documents
3. Run a single command / notebook
4. See a **draft DRHP section** as output

If we cannot run it and see real output, the submission will not be evaluated.

Context

A Draft Red Herring Prospectus (DRHP) is a regulated IPO filing in India.

It is structured, repetitive, fact-dense, and unforgiving to hallucinations.

Today, large parts of DRHP drafting are manual.

We believe a meaningful portion can be automated, provided:

- the output looks like a real DRHP
- all facts are grounded in source documents
- missing or unclear information is explicitly surfaced

This assignment tests that boundary.

Your Task

Build an **AI agent** that:

- ingests DRHP-related documents
- produces a **draft of one complete DRHP section**
- matches the structure, tone, and disclosure style of an actual DRHP

That's it.

Scope (Pick ONE Section Only)

Choose **one** of the following:

1. Capital Structure & Shareholding Pattern
2. Objects of the Issue
3. Business Overview
4. Risk Factors (basic structuring and extraction is sufficient)
5. Group Companies & Related Party Transactions

Sample document for Capital Structure: [Assignment File](#)

You only need to do one section, but it must feel complete and usable.

Inputs

Your system should accept:

- a real DRHP PDF (SME or Mainboard)
- supporting documents such as:
 - financial statements
 - shareholding tables
 - ROC filings
 - basic company description text

You should expect:

- messy formatting
- inconsistent terminology
- missing or partial data

This is intentional.

Output Requirements

1. Draft DRHP Section

The output must:

- follow real DRHP headings and structure
- use paragraph-style legal disclosure language
- avoid marketing or summarisation tone
- feel plausible if read without context

If it reads like an “AI summary”, it fails.

2. Automation Transparency (Mandatory)

Your output must clearly indicate:

- which parts were auto-extracted
- which document each fact came from
- which parts require human review or have missing data

You may use:

- inline comments
- footnotes
- tags
- a separate annotation file

Reviewability matters more than polish.

3. Intermediate Representation (Required)

Show at least one intermediate artifact, such as:

- a structured table
- JSON / YAML
- parsed schema output

This should clearly demonstrate how raw inputs became final text.

What You Do NOT Need To Do

You do not need to:

- produce perfect legal wording
- handle all edge cases
- automate subjective judgment
- implement full regulatory compliance

We only care that the automation boundary is clear and sensible.

Mandatory Deliverables

1. Working System

One of:

- runnable code repository
- notebook
- script

We should be able to execute it without guesswork.

2. Sample Run (Critical)

Show clearly:

- input documents used
- the exact command or cell executed
- the final generated DRHP section

This matters more than code aesthetics.

3. Short Explanation (Max 1 Page)

Explain briefly:

- how inputs flow through the system
- what is automated
- what is intentionally left for humans

Concise and concrete.

Evaluation Criteria

We will evaluate:

- does it actually run?
- does the output look like a real DRHP section?
- are facts traceable to source documents?
- are missing or unclear parts clearly flagged?
- does this feel usable by a real banking team?

We are not scoring fancy architectures or long explanations.

A Strong Submission Feels Like

- "I put documents in and got a real draft out."
- "I can clearly see what AI did and what needs review."
- "This would save real time in DRHP drafting."

Ship something real.
